VITAL BRAIN STATISTICS

ALZHEIMER'S DISEASE

SEVERE AD

PET SCAN

PRELIMINARY AD

Signs of AD are first noticed in the cerebral cortex, then spread to the hippocampus. Affected regions begin to atrophy as early as 40. Changes can begin 10-20 years before symptoms appear. Memory loss is the first sign of AD.

In severe AD, memory impairment is the most obvious and disabling symptom. Other signs include loss of interest in activities, loss of initiative, confusion, mood changes, and loss of insight. In advanced AD, there is a loss of ability to perform basic activities of daily living.

Dr. L. Schwartz
