Industrial Visit Report
Cold Chain System

Name of The Industry	: Cold Chain System
Academic Year	: 2021-22
Date of The Visit	: 15.9.21
Venue	: Region Alvaccine Torage, Madurai
Class/Year	: 2019-2020
No. of Participants	: 36
Faculty	: Dr. Sudhir

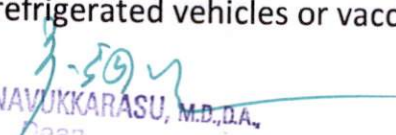

On the 15th of September 2021, about 36 students of the batch of 2019 were taken to The Regional Vaccine Storage, Madurai, stores the vaccine stores for 4 districts. Vaccines produced in Chennai are transported to the regional Vaccine storage by the modes of a vehicle attached with a freezer.

In the Vaccine storage, various types of refrigeration such as walk in coolers, walk in freezers, ice line refrigerators, vaccine carriers, cold boxes etc.

Vaccines such as oral polio vaccine and Rota vaccine are stored in walk in freezers where temps are in the range of -20

Whereas vaccines such as Penta vaccines, DPT, covid shield, covaxin are stored in walk in coolers.

Vaccines from the regional storage are transported to various health institutes like hospitals, PHC's etc. via refrigerated vehicles or vaccine carriers.

Subject: Permission for MBBS students to visit Drug Warehouse and Walk-in Cooler (cold chain system) at Collectorate Campus, Madurai -reg

Respected Sir,

As a part of medical education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University for field visits, we are planning to take the II year MBBS students (37) to visit Drug Warehouse, walk-in cooler (cold chain system) at Collectorate Campus at Madurai for the month of September 2021 (15.09.21) between 10 AM to 1 PM.

In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Water Treatment Plant

Industrial Visit Report

Name of The Industry	: Water Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 17.9.21
Venue	: Manaloor
Class/Year	: 2019-20 Batch
No. of Participants	: 36
Faculty	: Dr. Trupti

On the 17th of September 2021, about 36 students of the batch of 2019 were taken to Water treatment plant, Manaloor. .

Drinking water is a basic necessity. Raw water is processed and treated in Manaloor, on the banks of the river Vaigai.

The raw water from the river is first pumped into the Aerator tank using a 410-horsepower pump.

In the Aerator tank, large pieces of rock, stones, pebbles are being filtered and clear water is let into a sedimentation tank.

Coagulants such as alum are used to aggregate small particles, and sediment them faster.

The supernatant water is then sent into the chlorination tank.

About 1 ppm of chlorine is added and sent for consumption via pipes. In the pipes the chlorine concentration decreases and reaches to about 0.5 ppm by the time it reaches the consumers.

Subject: Permission for MBBS student's field visit to various plants of public health importance
-reg

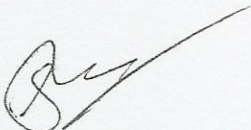

Respected Sir,

As a part of medical education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University for field visits, we are planning to take 37 students of II year MBBS to visit the various plants of public health importance in the month of September 2021. The proposed schedule of the field visits is as follow:

1. Water purification plant at Manaloor : 17/09/21
2. Sewage treatment plant at Avaniyapuram : 24/09/21
3. Solid waste compost yard Vellaikkal : 25/09/21

The payment for these services will be made according to the financial norms of the corporation. In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Madurai – 625 009.

Sir,

Sub: Madurai Corporation – Engineering Section – Water Treatment Plant (WTP) at Manaloor , Sewerage Treatment Plant (STP) at Avaniyapuram & Municipal Solid Waste Management (MSW) at Vellakkal – Permission granted for visit to WTP, STP & MSW – Permission granted for visit - Reg.

Ref: Your College, Letter No :VMCH/CM/72/21, Date: 02.09.2021

With reference to the above letter cited, permission is granted to 37 students of your college students studying in 2nd year M.B.B.S., and staffs to make an industrial visit to the following places and to collect the required details also.

Sl. No	Name of the Place	Date of Visit
1.	Water Purification Plant at Manaloor	17.09.2021
2.	Sewerage Treatment Plant at Avaniyapuram	24.09.2021
3.	Municipal Solid Waste Management at Vellakkal	25.09.2021

The Permission for data collection is academic purpose only. Covid-19, Standard Operation Procedure (SOP) is to be followed strictly during the visit to plants.

For City Engineer
Madurai Corporation

Environmental Lab

Industrial Visit Report

Name of The Industry : Environmental Lab
Academic Year : 2021-22
Date of The Visit : 23.9.21
Venue : Excellence Laboratory, Madurai
Class/Year : 2019-20
No. of Participants : 33
Faculty : Dr. Sriandaal

On 23rd September 2021, about 33 students of Posting C batch were taken to the excellence lab, bypass road, Madurai.

There the students were divided into 6 groups.

Microbiology Lab

Sample receiving area - where sample collected are received.

Medium preparation room - wet and dry sterilizer,

Inoculation room - humidity and temperature of the culture and sample is regulated here.

Incubation room- all the cultures prepared are incubated here.

Gas Chromatography

They showed the device used to check for the nano pollutants like PBA, benzene etc.. They prepare the solution using filter paper and keep it in the tray and it is vaporised into gases then it is ionised. Benzene and cholesterol etc are detected by the level of peak attained at a particular time.

Madurai-Tuticorin Ring Road
Anuppanadi, Madurai, T.N.-625 009

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

Metal Station

Equipment- atomic absorption spectrophotometer

Used to detect metals like nickel, copper, arsenic, mercury, etc based on their wavelength.

Wet section

They showed us the tests to detect the quality of water. The tests done are hardness of water, chloride content, ph, alkalinity, odour, colour, taste.

Sample collected- bore water, waste water, construction site etc.

Label - reference number, due date, collected date, received date.

Instrumentation

They showed PH meter, nephelo meter, BC meter, spectrophotometer, weighing scales.

And work principal of all the instruments.

Ph meter- used to check PH of water.

Nephelo meter - check turbidity

BC meter - check ions in the water

Weighing scale - weight of the respective filter paper before and after test

Subject: Permission for MBBS students to visit Excellence Laboratory -reg

Respected Sir,

As a part of medical education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University for field visits, we are planning to take the II year MBBS students (37) to visit Excellence Laboratory for the months of September 2021 (23.09.21) between 10 AM to 1 PM.

In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Solid Waste Management

Industrial Visit Report

Name of The Industry	: Solid Waste Management
Academic Year	: 2021-22
Date of The Visit	: 25.9.21
Venue	: Vellaikal
Class/Year	: 2019-20
No. of Participants	: 34
Faculty	: Dr. Sudharsan

On the 25th of September 2021, about 34 students of the batch of 2019 were taken to the Solid Waste Management centre at Vellaikal. The incharge person explained the whole process of solid waste management starting from receiving the waste at the centre to segregation to composting or sending the waste to landfills.

He explained that there are 4 zones and 100 wards that send about 650-700 tonne of waste per day to Vellaikal; but only about 450 tonne of waste can be segregated per day and the rest is sent directly to landfills.

There are 4 levels of segregation – 100mm, 36mm, 16mm and 4mm. Once the waste reaches the 100mm belt, manual picking of big items like plastic bottles is done after which it is passed through the 100mm screen. The rejected items are kept aside for 90 days and electrolyte microorganism solution that converts it to manure is added.

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,
Dean

Madurai-Tuticorin Ring Road 24
Anuppanadi, Madurai, T.N.-625.009

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

The accepted waste is now passed through the 36mm and 16mm screens and rejected substances are sent to the landfills while the accepted waste is kept aside for 30 days and then passed through the 4mm belt. The accepted sample is used as manure and the rejected sample at each step is sent to the landfills.

Subject: Permission for MBBS student's field visit to various plants of public health importance
-reg

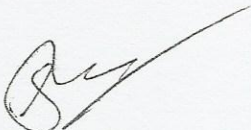

Respected Sir,

As a part of medical education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University for field visits, we are planning to take 37 students of II year MBBS to visit the various plants of public health importance in the month of September 2021. The proposed schedule of the field visits is as follow:

1. Water purification plant at Manaloor : 17/09/21
2. Sewage treatment plant at Avaniyapuram : 24/09/21
3. Solid waste compost yard Vellaikkal : 25/09/21

The payment for these services will be made according to the financial norms of the corporation. In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Water Treatment Plant

Industrial Visit Report

Name of The Industry : Water Treatment Plant
Academic Year : 2021-22
Date of The Visit : 19.10.21
Venue : Manaloor
Class/Year : 2019-20 Batch
No. of Participants : 32
Faculty : Dr. Trupti

On the 19th of October 2021, about 32 students of the batch of 2019 were taken to the Water Treatment Plant, Manaloor. They were shown the process of large scale water purification, in specific, the rapid sand filter. The process which was explained is as follows.

The water is collected via the Collecting Well Which runs about 15 hours in a day. It collects about 1.67 lakh L of water per hour, approximately 15 lakh L of water per day.

Then the water is directed via an apparatus that filters out large substances like rocks and debris.

Following this, water enters the RAPID SAND FILTER which has activated charcoal and water is purified here up to 95%.

MADURAI - 625009

Chlorination is the next step where 2ppm of chlorine is added to water that is used for domestic purposes and 0.5ppm to drinking water. To test if the water has been treated, o-Toludine was added to a sample of water. Colour change to yellow indicates that the water has been purified.

Water is finally directed via the outlet pipe to supply through the Madurai district.

Cold Chain System

Industrial Visit Report

Name of The Industry	: Cold Chain System
Academic Year	: 2021-22
Date of The Visit	: 22.10.21
Venue	: Regional Vaccine Store
Class/Year	: 2019-20
No. of Participants	: 36
Faculty	: Dr. Sudhir

On the 22nd of October 2021, about 36 students of the batch of 2019 were taken to the Regional Vaccine Store, Madurai District. They were shown many intermediaries in the cold chain process for storage and transportation of vaccines like the vaccine van, Ice box, Walk in freezer, walk in cooler etc.

The Vaccine Van is used for the transportation of vaccines in a cold storage box from the regional storage centre to PHCs where they are stored in cold storage boxes.

The Walk In Cooler is used following the principle of FiFo, which stands for First-In First-Out. The vaccine stores are released from the WIC in the order that they are brought in. OPV, JE vaccine Covaxin and Rabies vaccine are stored in the WIC.

MADURAI - 625009

The Ice Lined Refrigerator was another method of vaccine storage that was shown to the students. It is used to store a large bulk of vaccine. The refrigerator was lined with ice packs and its holding time (time that the refrigerator can stand not being connected to a power supply to maintain the low temperatures of -2° to -8°C) is about 30 minutes. From bottom to the top, the vaccines stored are OPV, BCG, Rota, HBV and TT. The WALK IN FREEZER was shown to the students in the end. It works on the basis of FeFo which stands for First Expiry First-Out. The temperature maintained in the WIF is between -28° and -17°C . Polio and Rotavirus vaccines are stored in the WIF.

Environmental Lab

Industrial Visit Report

Name of The Industry : Environmental Lab
Academic Year : 2021-22
Date of The Visit : 25.10.21
Venue : Excellence Laboratory
Class/Year : 2019-20
No. of Participants : 37
Faculty : Dr. Sudharsan

On 25th of October 2021, about 37 students of Posting B batch were taken to the excellence lab, bypass road, Madurai. –

It has 5 departments.

Wet lab:

Wet lab assess the effluents from factory -.it also measures ions, PH of water

Metal lab:

It detects the metal content in the water.

Micro lab:

Sample receiving area - receives sample.

Medium preparation room

Inoculation room

Incubation room

Sewage Treatment Plant

Industrial Visit Report

Name of The Industry : Sewage Treatment Plant
Academic Year : 2021-22
Date of The Visit : 26.10.21
Venue : Avaniyapuram
Class/Year : 2019-20
No. of Participants : 37
Faculty : Dr. Sriandaal

On 26th of October, 37 students of Batch B students were taken to Sewage treatment plant.

It is a 125 MLD treatment plant. The treatment plant collects sewage from the south of Madurai and treats the water.

The process of treatment is divided into two parts: Primary and secondary. Primary treatment consists of filtration of particles larger than 6mm, and gritting chamber, where clumps of sand and soil are broken down into smaller particles.

Secondary Treatment consists of sedimentation, aeration and chlorination. Activated sludge is used to aerobically decompose the biological particles in the sewage. The treated water is mixed with chlorine (5ppm) and let out. The sewage is 90% treated.

Solid Waste Management

Industrial Visit Report

Name of The Industry : Solid Waste Management
Academic Year : 2021-22
Date of The Visit : 27.10.21
Venue : Vellakkal
Class/Year : 2019-20
No. of Participants : 34
Faculty : Dr. Sudharsan

On 27th of October, 34 students of Batch B were taken to Solid waste management, Vellaikal.

They collect waste from 10 areas in and around Madurai. The waste is first weighed, the capacity of the site is 450 tonne, but per day the site receives around 600-700 tonne of waste.

The waste is first segregated into reusable, recyclable materials and compostable materials. The compostable materials are first allowed to decompose in piles and heaps, sprayed with natural decomposers. The decomposed materials are passed through 4 zones, namely 100mm, 36mm, 16mm, 4mm. The particles are passed through these filters and at the end of it fine manure is obtained and used for agriculture.

Subject: Permission for 39 MBBS student's field visit to various places of public health importance -Reg

Respected Sir,

As a part of Medical Education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University. The Department Of Community Medicine Of Velammal Medical College Hospital & Research Institute has scheduled field visit to places of public health importance in the month of October 2021 .The proposed schedule of the field visits is as follow:

4. Water purification plant at Manaloor : 19/10/21
5. Sewage treatment plant at Avaniyapuram : 26/10/21
6. Solid waste compost yard Vellaikkal : 27/10/21

The payment for these visits will be made as per to the norms of the corporation. In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Solid Waste Management

Industrial Visit Report

Name of The Industry	: Solid Waste Management
Academic Year	: 2021-22
Date of The Visit	: 15.11.21
Venue	: Vellaikal
Class/Year	: 2019-2020
No. of Participants	: 36
Faculty	: Dr. Sriandaal

On the 15th of November 2021, about 36 students of the batch of 2019 were taken to the Solid Waste Management centre at Vellaikal.

The incharge person explained the whole process of solid waste management starting from receiving the waste at the centre to segregation to compositing or sending the waste to landfills.

They divided us into 4 groups and took us different zones one by one and explained us everything.

He explained that there are 4 zones and 100 wards that send about 650-700 tonne of waste per day to Avaniyapuram; but only about 450 tonne of waste can be segregated per day and the rest is sent directly to landfills.

There are 4 levels of segregation – 100mm, 36mm, 16mm and 4mm.

Once the waste reaches the 100mm belt, manual picking of big items like

plastic bottles is done after which it is passed through the 100mm screen. The rejected items are kept aside for 90 days and electrolyte microorganism solution that converts it to manure is added.

The accepted waste is now passed through the 36mm and 16mm screens and rejected substances are sent to the landfills while the accepted waste is kept aside for 30 days and then passed through the 4mm belt. The accepted sample is used as manure and the rejected sample at each step is sent to the landfills.

Subject: Permission for MBBS student's field visit to various plants of public health importance -reg

Respected Sir,

As a part of medical education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University for field visits, we are planning to take 39 students of II year MBBS to visit the various plants of public health importance in the month of November 2021. The proposed schedule of the field visits is as follow:

1. Water purification plant at Manaloor : 19/11/2021
2. Sewage treatment plant at Avaniyapuram : 16/11/2021
3. Solid waste compost yard Vellaikkal : 15/11/2021

The payment for these services will be made according to the financial norms of the corporation. In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Sewage Treatment Plant

Industrial Visit Report

Name of The Industry	: Sewage Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 16.11.21
Venue	: Avaniyapuram
Class/Year	: 2019-20
No. of Participants	: 31
Faculty	: Dr. Sudhir Ben

On 16th November 2021, 31 students of Batch A were taken to Sewage treatment plant, Avaniyapuram .

The person explained to us completely about the Sewage treatment.

It includes 4 steps:-

Inlet chamber } Primary Process
Grit chamber }

Main gate }
Chlorination } Secondary Process

Dead sludge

It is a 25 MLD sewage treatment plant which means it treats about 25 million litres of sewage per day. Water first passes through an Inlet Chamber which has a screen that filters of particles > 6cm.

Then water is directed towards a Grit Chamber which has a fan like grit classifier which directs the water and all the substances that it contains

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

towards an organic pump which is responsible for breaking the larger substances into smaller ones.

The above two steps comprise the Primary Process.

The Secondary Process is as follows:

Water is passed through a Main Gate that is 46.70m x 6m x 46.70m large which has 6 barriers. Then it goes to the Selector Zone where Return Activator Sludge is continuously added to the inflow of water and this is mixed.

The total process of sewage treatment takes 216 minutes where filling and aeration takes 108 minutes, sedimentation takes 50 minutes and the remaining 58 minutes are taken up by decantation.

During the process of Chlorination For every 1 MLD, 5ppm of Chlorine is added to the water for purification.

The DEAD SLUDGE is taken up by the waste active sludge pump and for every 10 MLD of dead sludge, 2kg pauli electrolyte chemical is added to separate the solid and the liquid components.

The water is directed back into the Grit Chamber where purification takes place once again.

Subject: Permission for MBBS student's field visit to various plants of public health importance -reg

Respected Sir,

As a part of medical education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University for field visits, we are planning to take 39 students of II year MBBS to visit the various plants of public health importance in the month of November 2021. The proposed schedule of the field visits is as follow:

1. Water purification plant at Manaloor : 19/11/2021
2. Sewage treatment plant at Avaniyapuram : 16/11/2021
3. Solid waste compost yard Vellaikkal : 15/11/2021

The payment for these services will be made according to the financial norms of the corporation. In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Water Treatment Plant

Industrial Visit Report

Name of The Industry	: Water Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 19.11.21
Venue	: Manaloor
Class/Year	: 2019-20
No. of Participants	: 26
Faculty	: Dr. Sudharsan

On the 19th of November 2021, about 26 students of the batch of 2019 were taken to the Water Treatment Plant, Manaloor

They were shown the process of large scale water purification, in specific, the rapid sand filter. The process which was explained is as follows.

The water is collected via the Collecting Well which runs about 15 hours in a day. It collects about 1.67 lakh L of water per hour, approximately 15 lakh L of water per day. Then the water is directed via an apparatus that filters out large substances like rocks and debris.

Following this, water enters the Rapid Sand Filter which has activated charcoal and water is purified here up to 95%. Chlorination is the next

step where 2ppm of chlorine is added to water that is used for domestic purposes and 0.5ppm to drinking water. To test if the water has been treated, o-Toludine was added to a sample of water. Colour change to yellow indicates that the water has been purified.

Water is finally directed via the outlet pipe to supply through the Madurai district.

Dairy Visit

Industrial Visit Report

Name of The Industry	: Dairy Visit
Academic Year	: 2021-22
Date of The Visit	: 22.11.21
Venue	: Aavin, Sathamangalam, Madurai
Class/Year	: 2018-19
No. of Participants	: 69
Faculty	: Dr. Sudhir

On 22nd of November, 69 students of 2018-19 Batch were taken to Aavin Dairy, Sathamangalam, Madurai.

It is one of the major milk processing units for the city of Madurai where Milk and Dairy products are processed, manufactured and distributed to various milk depots across the city.

The visit aimed to educate the students about how milk must meet certain microbiological standards for it to be deemed safe for consumption.

The visit then proceeded with the description on the various milk products also manufactured in the plant. Including, but not limited to, evaporated milk, Milk powder, Condensed milk, Butter, Ghee, Ice-Creams etc.

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

The first part of the visit explained of raw milk was collected from collection tankers, containing milk. Next, the collected milk was separated into various categories depending on its fat content after quality control.

Finally, the storage areas of these milk packets was shown as it was temperature controlled area to prevent the growth of pathogenic bacteria.

Academic Year : 2021-22
Date of The Visit : 23.11.21
Venue : Solankuruni
Class/Year : 2018-19
No. of Participants : 67
Faculty : Dr. Sriandaal

On 23rd November 2021, 67 students of Posted Batch D were taken to Anganwadi centre, Solankuruni . Initially there was a short discussion about the Integrated Child Development Services(ICDS) and then the students were taken to the Anganwadi centre. The infrastructure of the centre was a single-storied building with 3 rooms of which one was for teaching purposes and the other two were for cooking and storage. There was one anganwadi worker and a helper. During the visit to the Anganwadi centre the following points were studied:

- ✓ Nutrition and health education to all women in the age group of 15-45 years of age with main priority to the pregnant and lactating mothers.
- ✓ Health services to children include—Record of growth & development of children at periodic intervals Immunization General check-up every 6 months & treatment Deworming Prophylaxis against vitamin A deficiency and anemia.

PHC & Subcentre

Industrial Visit Report

Name of The Industry : PHC & Subcentre
Academic Year : 2021-22
Date of The Visit : 23.11.21
Venue : Valayankulam
Class/Year : 2018-19
No .of Participants : 67
Faculty : Dr. Sriandaal

On 23rd November 2021, 67 students were taken to PHC & Subcentre. at valayankulam

The medical officer incharge how the PHC works.

PHC contains a duty doctor room and a medical officer room, They have Vaccine storage boxes, an OT for minor procedure and Labour room where normal labour are conducted. If there is any complicated pregnancy, they are sent to nearby Tertiary hospitals.

The subcentre near Valayankulam was visited next. An ANM staffed the Subcentre. The ANM staff goes to different localities and identifies TB cases, pregnant women, etc and advise them to visit PHC for which they are paid.

Cold Chain System

Industrial Visit Report

Name of The Industry	: Cold Chain System
Academic Year	: 2021-22
Date of The Visit	: 14.12.2021
Venue	: Regional Vaccine Storage, Madurai
Class/Year	: 2019-2020
No. of Participants	: 28
Faculty	: Dr. Sriandaal

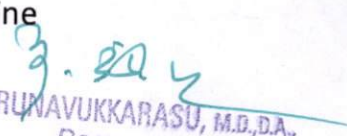

On the 14th December 2021, 28 students of the batch of 2019-20 were taken to The Regional Vaccine Storage, Madurai, which has the vaccine stores for 4 districts.

Vaccines produced in Chennai are transported to the regional Vaccine storage by the modes of a vehicle attached with a freezer.

In the Vaccine storage, various types of refrigeration such as walk in coolers, walk in freezers, ice line refrigerators, vaccine carriers, cold boxes etc.

Vaccines such as oral polio vaccine and Rota vaccine are stored in walk in freezers where temps are in the range of -20, whereas, vaccines such as Pentavalent, DPT, covid shield, covaxin are stored in walk in coolers

Vaccines from the regional storage are transported to various health institutes like hospitals, PHC's etc. via refrigerated vehicles or vaccine carriers.

Water Treatment Plant

Industrial Visit Report

Name of The Industry	: Water Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 16.12.21
Venue	: Manaloor
Class/Year	: 2019-2020
No. of Participants	: 28
Faculty	: Dr. Sriandaal

On 16th December 2019, 28 students of Batch D were taken to the Water treatment plant. The engineer in charge of the plant explained about the water treatment process.

There are 4 process of water treatment :-

Coagulation and Flocculation

Sedimentation

Filtration

Disinfection

Raw water is processed and treated to in Manaloor, on the banks of the river Vaigai.

The raw water from the river is first pumped into the Aerator tank using a 410-horsepower pump.

In the Aerator tank, large pieces of rock, stones, pebbles are being filtered and clear water is let into a sedimentation tank.

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

Coagulants such as alum are used to aggregate small particles, and sediment them faster.

The supernatant water is then sent into the chlorination tank. About 1 ppm of chlorine is added and sent for consumption via pipes. In the pipes the chlorine concentration decreases and reaches to about 0.5 ppm by the time it reaches the consumers.

The capacity of the water treatment plant is 450MLD and works for about 12-16 hours per day.

Finally, Water is sent to different pipelines for day-to-day use.

Subject: Permission for 32 MBBS student's field visit to various places of public health importance -Reg

Respected Sir,

As a part of Medical Education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University. The Department Of Community Medicine Of Velammal Medical College Hospital & Research Institute has scheduled field visit to places of public health importance in the month of December 2021. The proposed schedule of the field visits is as follow:

1. Water purification plant at Manaloor : 16/12/21
2. Sewage treatment plant at Avaniyapuram : 23/12/21
3. Solid waste compost yard Vellaikkal : 27/12/21

The payment for these visits will be made as per to the norms of the corporation. In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Solid Waste Management

Industrial Visit Report

Name of The Industry	: Solid Waste Management
Academic Year	: 2021-22
Date of The Visit	: 21.12.21
Venue	: Vellaikal
Class/Year	: 2018-19
No. of Participants	: 58
Faculty	: Dr. Sudharsan

On 21st of December 2021, 58 students of Batch B 2018 were taken to Solid waste management site at Vellaikal.

Waste products are collected in total from all the localities around 10 areas near Madurai.

The waste is first weighed, the capacity of the site is 450 tonnes, but per day the site receives around 800-1000 tonnes of waste.

The waste is first segregated into reusable, recyclable materials and compostable materials.

Under solid waste plastic, paper, cardboard, metals and glass get recycled by melting and grinding. After that, it is molded in another form which makes it reusable. The compostable materials are first allowed to decompose in piles and heaps, sprayed with natural decompositants.

Madurai-Tuticorin Ring Road
Anuppanadi, Madurai, T.N.-625 009

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

The decomposed materials are passed through 4 zones, namely 100mm, 36mm, 16mm, 4mm. The particles are passed through these filters and at the end of it fine manure is obtained and used for agriculture.

Sewage Treatment Plant

Industrial Visit Report

Name of The Industry	: Sewage Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 21.12.21
Venue	: Avaniyapuram
Class/Year	: 2018-19
No. of Participants	: 58
Faculty	: Dr. Sudharsan

On 21st of December 2021, 58 students of Batch B 2018 were taken to Sewage treatment plant, Avaniyapuram.

It is a 125 MLD treatment plant. The treatment plant collects sewage from the south of Madurai and treats the water.

The process of treatment is divided into two parts:-

1. Primary
2. Secondary

Primary treatment consists of:-

Filtration of particles (larger than 6mm)

Gritting chamber (where clumps of sand, soil are broken down into smaller particles.)

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,
Dean
Velammal Medical College Hospital
and Research Institute
"Velammal Village"
Madurai-Tuticorin Ring Road
Anuppanadi, Madurai-625 009, T.N.

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

Secondary Treatment consists of:-

Sedimentation

Aeration

Chlorination

Activated sludge is used to aerobically decompose the biological particles in the sewage. The treated water is mixed with chlorine (5ppm) and let out. The sewage is 90% treated.

Subject: Permission for 73 MBBS student's field visit to various places of public health importance -Reg

Respected Sir,

As a part of Medical Education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University. The Department Of Community Medicine Of Velammal Medical College Hospital & Research Institute has scheduled field visit to places of public health importance in the month of December 2021. The proposed schedule of the field visits is as follow:

1. Water purification plant at Manaloor : 20/12/21
2. Sewage treatment plant at Avaniyapuram : 22/12/21
3. Solid waste compost yard Vellaikkal : 21/12/21

The payment for these visits will be made as per to the norms of the corporation. In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Sewage Treatment Plant

Industrial Visit Report

Name of The Industry	: Sewage Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 23.12.21
Venue	: Avaniyapuram
Class/Year	: 2019-20
No. of Participants	: 30
Faculty	: Dr. Mareeswaran

On 23rd December 2021, 30 students of Batch D 2019 were taken to Sewage treatment plant, Avaniyapuram.

It is a 125 MLD treatment plant. The treatment plant collects sewage from the south of Madurai and treats the water.

The process of treatment is divided into two parts:-

1. Primary
2. Secondary

Primary treatment consists of:-

Filtration of particles (larger than 6mm)

Gritting chamber (where clumps of sand, soil are broken down into smaller particles.)

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,
Dean
Velammal Medical College Hospital
and Research Institute

Madurai-Tuticorin Ring Road
Anuppanadi, Madurai-625 009, T.N.

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

Secondary Treatment consists of:-

Sedimentation

Aeration

Chlorination

Activated sludge is used to aerobically decompose the biological particles in the sewage. The treated water is mixed with chlorine (5ppm) and let out. The sewage is 90% treated.

Environmental Lab

Industrial Visit Report

Name of The Industry : Environmental Lab
Academic Year : 2021-22
Date of The Visit : 30.12.21
Venue : Excellence Laboratory
Class/Year : 2019-20
No. of Participants : 27
Faculty : Dr. Sudhir

On 30th December 2021, 27 students of Posting D batch were taken to the excellence lab, bypass road, SS colony, Madurai.

The lab consists of five sections and the students visited each of them in small groups.

Instrumentation

Instruments used in this section are PH meter, nephelometer, BC meter, spectrophotometer, weighing scales.

Ph meter- used to check PH of water.

Nephelometer - check turbidity

BC meter - check ions in the water

Weighing scale - weight of the respective filter paper before and after test

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,
Dean

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

Microbiology Lab

Sample receiving area - where sample collected are received.

Medium preparation room - wet and dry sterilizer,

Inoculation room - humidity and temperature of the culture and sample is regulated here.

Incubation room- all the culture prepared are incubated here.

Gas Chromatography

They showed the device used to check for the nano pollutants like PBA, benzene etc. They prepare the solution using filter paper and keep it in the tray and it is vaporised into gases then it is ionised. Benzene and cholesterol etc are detected by the level of peak attained at a particular time.

Metal Station

Used to detect metals like nickel, copper, arsenic, mercury, etc based on its wavelength.

Equipment- atomic absorption spectrophotometer

Wet section

They do test to detect the quality of water. The test done are hardness of water, chloride content, PH alkalinity, odour, colour, taste.

Sample collected- bore water, waste water, construction site etc.

Label - reference number, due date, collected date, received date.

Environmental Lab

Industrial Visit Report

Name of The Industry : Environmental Lab
Academic Year : 2021-22
Date of The Visit : 04.01.22
Venue : Excellence Laboratory, Madurai
Class/Year : 2018-19
No. of Participants : 46
Faculty : Dr. Sudhir

On 4th of January 2022, 46 students of 2018-19 batch visited the Public Health Laboratory - the Excellence lab, bypass road, Madurai.

The lab consists of five sections and the students visited each of them in small groups.

Instrumentation

Instruments used in this section are PH meter, nephelometer, BC meter, spectrophotometer.

Ph meter- used to check PH of water.

Nephelometer - check turbidity

BC meter - check ions in the water

Weighing scale - weight of the respective filter paper before and after test

Madurai-Tuticorin Ring Road
Anuppanadi, Madurai-625 000, TN.

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

Microbiology Lab

Sample receiving area - where sample collected are received.

Medium preparation room - wet and dry sterilizer,

Inoculation room - humidity and temperature of the culture and sample is regulated here.

Incubation room- all the culture prepared are incubated here.

Gas Chromatography

They showed the device used to check for the nano pollutants like PBA, benzene etc. They prepare the solution using filter paper and keep it in the tray and it is vaporised into gases then it is ionised. Benzene and cholesterol etc are detected by the level of peak attained at a particular time.

Metal Station

It is used to detect metals like nickel, copper, arsenic, mercury, etc based on its wavelength.

Equipment- atomic absorption spectrophotometer

Wet section

They do test to detect the quality of water. The tests done are hardness of water, chloride content, PH, alkalinity, odour, colour, taste.

Sample collected- bore water, waste water, construction site etc.

Label - reference number, due date, collected date, received date.

PHC & Subcentre

Industrial Visit Report

Name of The Industry : PHC & Subcentre
Academic Year : 2021-22
Date of The Visit : 10-05-2022
Venue : Valayankulam
Class/Year : 2020-21
No. of Participants : 19
Faculty : Dr. Sudhir

On 10th May 2022, 19 students were taken to PHC Subcentre.

Here, they divided us into 2 groups and the incharge person explained to us on how the PHC works.

PHC contains a duty doctor room and a medical officer room, They have Vaccine storage boxes, an OT for minor procedure and Labour room where normal labour are conducted. If there is any complicated pregnancy, they are sent to nearby Tertiary hospitals.

The subcentre has an ANM staff. She explained about the work done through the subcentre.

The ANM staff goes to different localities and identifies TB cases, pregnant women, etc and advise them to visit PHC for which they are paid.

Cold Chain System

Industrial Visit Report

Name of The Industry : Cold Chain System
Academic Year : 2021-22
Date of The Visit : 11.05.2022
Venue : Regional Vaccine Storage, Madurai
Class/Year : 2020-2021
No. of Participants : 19
Faculty : Dr. Sriandaal

On the 11th May 2022, about 19 students of the batch of 2020 were taken to The Regional Vaccine Storage, Madurai, which has the vaccine stores for 4 districts.

Vaccines produced in Chennai are transported to the regional Vaccine storage by the modes of a vehicle attached with a freezer.

In the Vaccine storage, various types of refrigeration such as walk in coolers, walk in freezers, ice line refrigerators, vaccine carriers, cold boxes etc. Vaccines such as oral polio vaccine and Rota vaccine are stored in walk in freezers where temps are in the range of -20, whereas, vaccines such as Pentavalent, DPT, Covid shield, covaxin are stored in walk in coolers Vaccines from the regional storage are transported to various health institutes like hospitals, PHC's etc. via refrigerated vehicles or vaccine carriers.

Subject: Permission for MBBS students to visit Regional vaccine store at Collectorate Campus,
Madurai -reg

Respected Sir,

As a part of Medical Education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University for field visits, we are planning to take the II year MBBS students (25) to visit Regional vaccine store at Collectorate Campus at Madurai for the month of May 2022. (11.05.2022) between 9 AM to 12 Noon.

In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Solid Waste Management

Industrial Visit Report

Name of The Industry	: Solid Waste Management
Academic Year	: 2021-22
Date of The Visit	: 12.05.2022
Venue	: Vellakkal
Class/Year	: 2020-21
No. of Participants	: 20
Faculty	: Dr. Sriandaal

On the 12th May 2022, 20 students of the batch of 2022 were taken to the Solid Waste Management centre at Vellakkal.

The incharge person explained the whole process of solid waste management starting from receiving the waste at the centre to segregation to composting or sending the waste to landfills.

He explained that there are 4 zones and 100 wards that send about 700-800 tonne of waste per day to Vellakkal; but only about 500 tonne of waste can be segregated per day and the rest is sent directly to landfills.

There are 4 levels of segregation – 100mm, 36mm, 16mm and 4mm.

Once the waste reaches the 100mm belt, manual picking of big items like plastic bottles is done after which it is passed through the 100mm screen. The rejected items are kept aside for 90 days and electrolyte microorganism solution that converts it to manure is added.

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,

Dean

Velammal Medical College Hospital

Madurai-Tuticorin Ring Road
Anuppanadi, Madurai-625 009. T.N.

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

The accepted waste is now passed through the 36mm and 16mm screens and rejected substances are sent to the landfills while the accepted waste is kept aside for 30 days and then passed through the 4mm belt. The accepted sample is used as manure and the rejected sample at each step is sent to the landfills.

Water Treatment Plant

Industrial Visit Report

Name of The Industry	: Water Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 13.05.2022
Venue	: Manalur
Class/Year	: 2019-20 Batch
No. of Participants	: 19
Faculty	: Dr. Vasumathi

On the 13th May 2022, about 19 students of the batch of 2019 were taken to Water treatment plant, Manaloor. Drinking water is a basic necessity. Raw water is processed and treated to in Manaloor, on the banks of the river Vaigai.

The raw water from the river is first pumped into the Aerator tank using a 410-horsepower pump.

In the Aerator tank, large pieces of rock, stones, and pebbles are being filtered and clear water is let into a sedimentation tank.

Coagulants such as alum are used to aggregate small particles, and sediment them faster.

The supernatant water is then sent into the chlorination tank. About 1 ppm of chlorine is added and sent for consumption via pipes. In the pipes the chlorine concentration decreases and reaches to about 0.5 ppm by the time it reaches the consumers.

Sewage Treatment Plant

Industrial Visit Report

Name of The Industry : Sewage Treatment Plant
Academic Year : 2021-22
Date of The Visit : 16.05.2022
Venue : Avaniyapuram
Class/Year : 2020-2021
No. of Participants : 17
Faculty : Dr. Sudhir

On 16th May 2022, 17 students of Batch D 2020 were taken to Sewage treatment plant, Avaniyapuram. The person explained to us completely about the Sewage treatment.

It includes 4 steps:-

Inlet chamber } Primary Process
Grit chamber }
Main gate } Secondary Process
Chlorination }

Prof. T. THIRUNAVUKKARASU, M.D.,P.A.,
Dean
Velammal Medical College Hospital
and Research Institute

Madurai-Tulicorin Ring Road
Anuppanadi, Madurai-625 009, T.N.

**VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009**

Dead sludge

It is a 25 MLD sewage treatment plant which means it treats about 25 million litres of sewage per day. Water first passes through an Inlet Chamber which has a screen that filters of particles > 6cm.

Then water is directed towards a Grit Chamber which has a fan like grit classifier which directs the water and all the substances that it contains towards an organic pump which is responsible for breaking the larger substances into smaller ones.

The above two steps comprise the Primary Process.

The Secondary Process is as follows:

Water is passed through a Main Gate that is 46.70m x 6m x 46.70m large which has 6 barriers. Then it goes to the Selector Zone where Return Activator Sludge is continuously added to the inflow of water and this is mixed.

The total process of sewage treatment takes 216 minutes where filling and aeration takes 108 minutes, sedimentation takes 50 minutes and the remaining 58 minutes are taken up by decantation. During the process of Chlorination for every 1 MLD, 5ppm of Chlorine is added to the water for purification. The Dead Sludge is taken up by the waste active sludge pump and for every 10 MLD of dead sludge, 2kg pauli electrolyte chemical is added to separate the solid and the liquid components.

The water is directed back into the Grit Chamber where purification takes place once again.

Solid Waste Management

Industrial Visit Report

Name of The Industry	: Solid Waste Management
Academic Year	: 2021-22
Date of The Visit	: 09.06.2022
Venue	: Vellakkal
Class/Year	: 2020-21
No. of Participants	: 23
Faculty	: Dr. Sriandaal

On the 9th June 2022, about 23 students of the batch of 2020-21 were taken to the Solid Waste Management centre at Vellakkal.

The incharge person explained the whole process of solid waste management starting from receiving the waste at the centre to segregation to compositing or sending the waste to landfills.

He explained that there are 4 zones and 100 wards that send about 700-800 tonne of waste per day to Vellaikal; but only about 500 tonne of waste can be segregated per day and the rest is sent directly to landfills.

There are 4 levels of segregation – 100mm, 36mm, 16mm and 4mm.

Once the waste reaches the 100mm belt, manual picking of big items like plastic bottles is done after which it is passed through the 100mm screen. The rejected items are kept aside for 90 days and electrolyte microorganism solution that converts it to manure is added.

*Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,

Anuppanadi, Madurai-625 009, T.N.*

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

The accepted waste is now passed through the 36mm and 16mm screens and rejected substances are sent to the landfills while the accepted waste is kept aside for 30 days and then passed through the 4mm belt. The accepted sample is used as manure and the rejected sample at each step is sent to the landfills.

Subject: Permission for 25 MBBS student's field visit to various places of public health importance -reg

Respected Sir,

As a part of Medical Education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University. The Department Of Community Medicine Of Velammal Medical College Hospital & Research Institute has scheduled field visit to places of public health importance in the month of June 2022. The proposed schedule of the field visits is as follow:

1. Water purification plant at Manaloor : 08/06/22
2. Solid waste compost yard Vellaikkal : 09/06/22
3. Sewage treatment plant at Avaniyapuram : 10/06/22

The payment for these visits will be made as per to the norms of the corporation. In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Water Treatment Plant

Industrial Visit Report

Name of The Industry	: Water Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 08.06.2022
Venue	: Manaloor
Class/Year	: 2019-20
No. of Participants	: 25
Faculty	: Dr. Vasumathi

On 8th June 2022, about 25 students of the batch of 2019-20 were taken to Water treatment plant. Drinking water is a basic necessity. Raw water is processed and treated in Manaloor, on the banks of the river Vaigai.

The raw water from the river is first pumped into the Aerator tank using a 410-horsepower pump. In the Aerator tank, large pieces of rock, stones, and pebbles are being filtered and clear water is let into a sedimentation tank.

Coagulants such as alum are used to aggregate small particles, and sediment them faster.

The supernatant water is then sent into the chlorination tank. About 1

ppm of chlorine is added and sent for consumption via pipes. In the

pipes the chlorine concentration decreases and reaches to about 0.5 ppm by the time it reaches the consumers.

The capacity of the water treatment plant is 450MLD and works for about 12-16 hours per day.

Sewage Treatment Plant

Industrial Visit Report

Name of The Industry : Sewage Treatment Plant
Academic Year : 2021-22
Date of The Visit : 10.06.2022
Venue : Avaniyapuram
Class/Year : 2020-2021
No. of Participants : 18
Faculty : Dr. Sudharshan

On 10th June 2022, 18 students of Batch D 2020-21 were taken to Sewage treatment plant, Avaniyapuram.

The person in charge explained completely about the Sewage treatment.

It includes 4 steps:-

Inlet chamber } Primary Process
Grit chamber }
Main gate }
Chlorination } Secondary Process

Dead sludge

It is a 25 MLD sewage treatment plant which means it treats about 25 million litres of sewage per day.

Water first passes through an Inlet Chamber which has a screen that filters of particles > 6cm.

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,
Dean
Velammal Medical College Hospital
and Research Institute
"Velammal Village"
Madurai-Tuticorin Ring Road
Anuppanadi, Madurai, T.N.-625 009

**VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009**

Then water is directed towards a Grit Chamber which has a fan like grit classifier which directs the water and all the substances that it contains towards an organic pump which is responsible for breaking the larger substances into smaller ones.

The above two steps comprise the Primary Process.

The Secondary Process is as follows:

Water is passed through a Main Gate that is 46.70m x 6m x 46.70m large which has 6 barriers. Then it goes to the Selector Zone where Return Activator Sludge is continuously added to the inflow of water and this is mixed.

The total process of sewage treatment takes 216 minutes where filling and aeration takes 108 minutes, sedimentation takes 50 minutes and the remaining 58 minutes are taken up by decantation. During the process of Chlorination for every 1 MLD, 5ppm of Chlorine is added to the water for purification.

The Dead Sludge is taken up by the waste active sludge pump and for every 10 MLD of dead sludge, 2kg pauli electrolyte chemical is added to separate the solid and the liquid components. The water is directed back into the Grit Chamber where purification takes place once again.

PHC

Industrial Visit Report

Name of The Industry : PHC
Academic Year : 2021-22
Date of The Visit : 13-06-2022
Venue : Valayankulam
Class/Year : 2019-20
No. of Participants : 25
Faculty : Dr. Sriandaal

On 13th June 2022, 25 students were taken to PHC & Subcentre by Dr Sriandaal.

Here, they divided were into 2 groups and taken to various sections in the PHC. The Medical officer incharge explained about the work through the PHC.

PHC contains a Duty doctor room and A medical officer room. They have Vaccine storage boxes , an OT for minor procedure and Labour room where normal labour are conducted. If any complicated pregnancy they are sent to nearby Tertiary hospitals.

The subcentre is staffed by the ANM. The ANM serves as the bridge between the people of the villages and the public health system.

The ANM goes to different localities and identify cases, pregnant women, etc and advise them to visit PHC.

Anganwadi

Industrial Visit Report

Name of The Industry : Anganwadi
Academic Year : 2021-22
Date of The Visit : 14-06-2022
Venue : Solankuruni
Class/Year : 2020-21
No. of Participants : 25
Faculty : Dr. Vasumathi

On 14th June 2022, 25 students were taken to Anganwadi by Dr. Vasumathi. Here, they divided into 2 groups and the incharge person explained us on how the Anganwadi works. They do Growth monitoring of all the kids enrolled and also maintain their records.

In addition to that, they are also responsible for nutritional food preparation for the children. They also provide non-formal education.

Other services such as vaccinations are also done. Vaccine survey in association with ANM from sub-centre is also carried out.

Water Treatment Plant

Industrial Visit Report

Name of The Industry	: Water Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 08.07.2022
Venue	: Manaloor
Class/Year	: 2020-21
No. of Participants	: 27
Faculty	: Dr. Sriandaal

On the 8th July 2022, about 27 students of the batch of 2020 were taken to Water treatment Plant.

Drinking water is a basic necessity. Raw water is processed and treated in Manaloor, on the banks of the river Vaigai. The raw water from the river is first pumped into the Aerator tank using a 410-horsepower pump. In the Aerator tank, large pieces of rock, stones, and pebbles are being filtered and clear water is let into a sedimentation tank.

Coagulants such as alum are used to aggregate small particles, and sediment them faster.

The supernatant water is then sent into the chlorination tank.

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

About 1 ppm of chlorine is added and sent for consumption via pipes. In the pipes the chlorine concentration decreases and reaches to about 0.5 ppm by the time it reaches the consumers.

The capacity of the water treatment plant is 450MLD and works for about 12-16 hours per day.

Solid Waste Management

Industrial Visit Report

Name of The Industry	: Solid Waste Management
Academic Year	: 2021-22
Date of The Visit	: 11.07.2022
Venue	: Vellakkal
Class/Year	: 2020-21
No. of Participants	: 26
Faculty	: Dr. Vasumathi

On the 11th of JULY 2022, about 26 students of the batch B (2020-21) were taken to the Solid Waste Management centre at Vellakkal.

The incharge person explained the whole process of solid waste management starting from receiving the waste at the centre to segregation to compositing or sending the waste to landfills.

He explained that there are 4 zones and 100 wards that send about 700-800 tonne of waste per day to Vellakkal; but only about 500 tonne of waste can be segregated per day and the rest is sent directly to landfills.

There are 4 levels of segregation – 100mm, 36mm, 16mm and 4mm.

Once the waste reaches the 100mm belt, manual picking of big items like plastic bottles is done after which it is passed through the 100mm screen. The rejected items are kept aside for 90 days and electrolyte microorganism solution that converts it to manure is added.

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,
Dean

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

The accepted waste is now passed through the 36mm and 16mm screens and rejected substances are sent to the landfills while the accepted waste is kept aside for 30 days and then passed through the 4mm belt. The accepted sample is used as manure and the rejected sample at each step is sent to the landfills.

Subject: Permission for 30 MBBS student's field visit to various places of public health importance -Reg

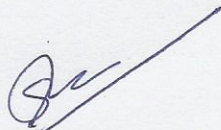

Respected Sir,

As a part of Medical Education curriculum prescribed by the Tamil Nadu Dr. MGR Medical University. The Department Of Community Medicine Of Velammal Medical College Hospital & Research Institute has scheduled field visit to places of public health importance in the month of July 2022. The proposed schedule of the field visits is as follow:

1. Water purification plant at Manaloor : 08/07/22
2. Solid waste compost yard Vellaikkal : 11/07/22
3. Sewage treatment plant at Avaniyapuram : 12/07/22

The payment for these visits will be made as per to the norms of the corporation. In this regard, I request you kindly provide permission for the same.

Thanking you,

Dr. Samir Bele

Sewage Treatment Plant

Industrial Visit Report

Name of The Industry	: Sewage Treatment Plant
Academic Year	: 2021-22
Date of The Visit	: 12.07.2022
Venue	: Avaniyapuram
Class/Year	: 2020-2021
No. of Participants	: 27
Faculty	: Dr. Vasumathi

On 12th July 2022, 27 students of Batch B 2020 were taken to Sewage treatment plant, Avaniyapuram .

They divided us into 2 groups and took us one group after the other.

The person explained us completely about the Sewage treatment.

It includes 4 steps:-

Inlet chamber	} Primary Process
Grit chamber	
Main gate	} Secondary Process
Chlorination	

Dead sludge

It is a 25 MLD sewage treatment plant which means it treats about 25 million litres of sewage per day.

Water first passes through an Inlet Chamber which has a screen that filters of particles > 6cm.

Prof. T. THIRUNAVUKKARASU, M.D.,D.A.,
Dean
Velammal Medical College Hospital
and Research Institute
"Velammal Village"
Madurai-Tuticorin Ring Road
Anuppanadi, Madurai, T.N.-625 009

VELAMMAL MEDICAL COLLEGE
HOSPITAL AND RESEARCH INSTITUTE
MADURAI - 625009

Then water is directed towards a Grit Chamber which has a fan like grit classifier which directs the water and all the substances that it contains towards an organic pump which is responsible for breaking the larger substances into smaller ones.

The above two steps comprise the Primary Process.

The Secondary Process is as follows:

Water is passed through a Main Gate that is 46.70m x 6m x 46.70m large which has 6 barriers. Then it goes to the Selector Zone where Return Activator Sludge is continuously added to the inflow of water and this is mixed.

The total process of sewage treatment takes 216 minutes where filling and aeration takes 108 minutes, sedimentation takes 50 minutes and the remaining 58 minutes are taken up by decantation.

During the process of Chlorination for every 1 MLD, 5ppm of Chlorine is added to the water for purification. The Dead Sludge is taken up by the waste active sludge pump and for every 10 MLD of dead sludge, 2kg Pauli electrolyte chemical is added to separate the solid and the liquid components. The water is directed back into the Grit Chamber where purification takes place once again.

PHC & Subcentre

Industrial Visit Report

Name of The Industry : PHC & Subcentre
Academic Year : 2021-22
Date of The Visit : 13-07-2022
Venue : Valayankulam
Class/Year : 2020-21
No. of Participants : 26
Faculty : Dr. Sriandaal

On 13th July 2022, 26 students were taken to PHC & Subcentre at Valayankulam. The incharge medical officer explained how the PHC works. PHC contains a duty doctor room and a medical officer room. They have Vaccine storage boxes, an OT for minor procedure and Labour room where normal labour is conducted. If there is any complicated pregnancy, they are sent to nearby Tertiary hospitals. All the nearby village people come to the PHC.

The subcentre is staffed by the ANM. The ANM staff goes to different localities and identifies TB cases, pregnant women, etc and advise them to visit PHC for which they are paid.

Industrial Visit Report

Name of The Industry : Anganwadi
Academic Year : 2021-22
Date of The Visit : 13-07-2022
Venue : Solankuruni
Class/Year : 2020-21
No. of Participants : 26
Faculty : Dr. Sriandaal

On 13th July 2022, 26 students were taken to anganwadi centre at Solankurunai. The incharge Anganwadi worker explained in detail the workings of the Anganwadi. The anganwadi provides nutritional services in the form of cooked meal to the children below 6 years. They also provide supplementary nutrition & Health education to various other beneficiaries like antenatal mothers, Postnatal mothers, Adolescent girls etc. Growth monitoring of children is also regularly done. In collaboration with ANM vaccination, periodic health checkup etc. They also assist the ANM in various field activities.

Cold Chain System

Industrial Visit Report

Name of The Industry : Cold Chain System
Academic Year : 2022-23
Date of The Visit : 14.7.2022
Venue : Regional Vaccine Storage, Madurai
Class/Year : 2020-21
No. of Participants : 26
Faculty : Dr. Sriandaal

On the 14th of July 2022, about 26 students of the batch of 2020 were taken to The Regional Vaccine Storage, Madurai, stores the vaccine stores for 4 districts.

Vaccines produced in Chennai are transported to the regional Vaccine storage by the modes of a vehicle attached with a freezer.

In the Vaccine storage, various types of refrigeration such as walk in coolers, walk in freezers, ice line refrigerators, vaccine carriers, cold boxes etc. Vaccines such as oral polio vaccine and Rota vaccine are stored in walk in freezers where temps are in the range of -20, whereas vaccines such as Penta vaccines, DPT, covid shield, covaxin are stored in walk in coolers.

Vaccines from the regional storage are transported to various health institutes like hospitals, PHC's etc. via refrigerated vehicles or vaccine carriers.
